

SAP® Business One at Krazy Glue: Sticking to Business

Before: Challenges and Opportunities

- "...we wanted to fine-tune our processes so we could better manage our production, inventory, and financials."
- Needed a better and more efficient way to manage production
- Krazy Glue's existing accounting software did not plan to expand or upgrade the solution, so management knew it would not serve the business moving forward

Why SAP and LBSi

- "From my past experience, I know SAP to be reliable, Some of the other solutions we considered are not so much so. And SAP's price is good."

After: Value-Driven Results

- Over the course of the implementation, the number of licenses quadrupled, and today all office and management staff are users
- The company has increased its sales volume by a minimum of five to 10 percent with a 20 percent increase in work, without hiring additional staff
- The software gives users integrated accounting functionality so they now know that warehouse management and financial accounting data are consistently synchronized

"Our president has done every function in the system...he is amazed at **how easy SAP Business One is to use.**"
